1. CyclicRotation

Rotate an array to the right by a given number of steps.

Task Score	Correctness	Performance
87%	87%	Not assessed

Task description

An array A consisting of N integers is given. Rotation of the array means that each element is shifted right by one index, and the last element of the array is moved to the first place. For example, the rotation of array A = [3, 8, 9, 7, 6] is [6, 3, 8, 9, 7] (elements are shifted right by one index and 6 is moved to the first place).

The goal is to rotate array A K times; that is, each element of A will be shifted to the right K times.

Write a function:

```
class Solution { public int[] solution(int[] A,
int K); }
```

that, given an array A consisting of N integers and an integer K, returns the array A rotated K times.

For example, given

```
A = [3, 8, 9, 7, 6]
K = 3
```

Solution

Programming language used:	Java 8
Total time used:	20 minutes
Effective time used:	20 minutes
Notes:	*not defined yet*

Task timeline

the function should return [9, 7, 6, 3, 8]. Three rotations were made:

```
[3, 8, 9, 7, 6] -> [6, 3, 8, 9, 7]
[6, 3, 8, 9, 7] -> [7, 6, 3, 8, 9]
[7, 6, 3, 8, 9] -> [9, 7, 6, 3, 8]
```

For another example, given

```
A = [0, 0, 0]
K = 1
```

the function should return [0, 0, 0]

Given

```
A = [1, 2, 3, 4]
K = 4
```

the function should return [1, 2, 3, 4]

Assume that:

- N and K are integers within the range [0..100];
- each element of array A is an integer within the range [−1,000..1,000].

In your solution, focus on **correctness**. The performance of your solution will not be the focus of the assessment.

```java
// you can also use imports, for example:
// import java.util.*;

// you can write to stdout for debugging purposes,
// System.out.println("this is a debug message");

class Solution {
    public int[] solution(int[] A, int K) {
        int n = A.length;
        K = K%n;
        if(n==0 || K==0)
            return A;
        int rotate[] = new int[n];
        for(int i =0;i<n ;i++){
            rotate[(i+K)%n]=A[i];
        }
        return rotate;
    }
}
```

Analysis summary

The following issues have been detected: runtime errors.

For example, for the input `([], 0)` the solution terminated unexpectedly.
